Price 25.00\$ Offered Price: 20.00\$

You Save: 5.00\$

[CLICK HERE TO DISPLAY DEMO](#)

PPG is a **powerful and stylish gallery of images written in as3.**

With PPG you can simply **create categories** and **add images in assets folder**, and **write (cut and paste) few lines in a XML file** to make photogallery works. **No actionscript experience is needed.**

Features:

- PPG is **resizable to automatically fit browser windows**;
- Works with **categories**;
- **XML driven**, and then easy to update;
- Powerful **full screen ZOOM**;
- You can also use PPG as a **Slideshow** by pressing the play button;
- Every image can **have its own caption stored in XML** file;
- For easy of use you can set **THUMBMODE switch: PPG will make and display thumbs images for you**;
- **Images AUTOSIZING** to fit viewer windows. You **don't have to resize your images. PPG does this for you**, so every image in gallery will be adapted to viewer window size with the correct proportion scaling;
- PPG uses a **clean preloader** with percent both for images and thumbnails;
- PPG comes with a **stylish interface** but **you can modify it by work on assets** in the library;
- **Full commented code!**

Also, PPG class is **highly customizable and adaptable to your projects**, it uses TweenMax transitions engine (TweenMax classes are included since we are Corporate Club GreenSock member) .
